Daleel: knows where you are, and who can help

An employee-side companion for onboarding and internal moves. It knows the journey stage, answers with the policy source, hands routine requests to the right team, and flags friction before it becomes a complaint.

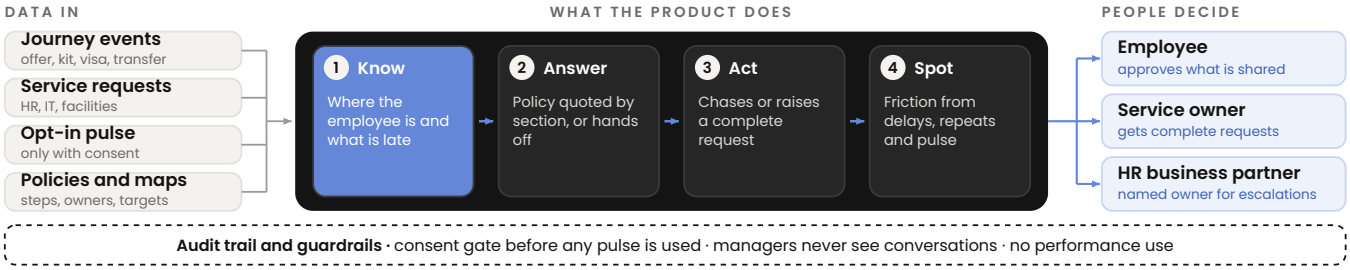

22/22	100%	56/56	12
hidden-scenario style tests, incl. Arabic	friction precision and recall	root cause and owner correct	policies cited by section

Data limitation. The official data pack was not published, so we curated a synthetic sample in the brief's shape (200 employees, 1,418 journey events, 12 policies, seed 2310, never used while building). Results show the approach on that sample, not on Emirates data. **All findings and files:** github.com/pratikkp24/aonami-daleel-emirates-journey-companion

Hosted, no install. Press **Guided demo**.

THE APPROACH

The signals that someone is stuck already exist, scattered across HR, IT, facilities, learning and government services. Daleel joins them into one journey per employee, compares it with the expected steps and target times in the journey maps, and acts for the employee. **No cloud AI is used.** Intent, status and routing are deterministic; every policy answer is a quoted section of a published policy; when Daleel is not sure, it says so and hands off to a named person.

SCENARIO PERFORMANCE

Before the official pack, we built our own in the brief's shape: 200 employees, about 1,500 journey events, service requests, opt-in pulse, 12 policies and both journey maps, with **56 planted friction cases** (stalled visa, laptop missing on day 5, training not booked, housing not arranged before a move, transfer approval late) and **15 near misses** that must not be flagged (done exactly on the target date, request at its response time, low pulse without consent).

These tests run live on the Scenario tests page and re-run on any pack loaded, so judges can check them on their own data. Unseen phrasings matched 15 of 24 on the first pass and 24 of 24 after fixes; when Daleel is not sure, it hands off to a person.

EMPLOYEE EXPERIENCE

One place to ask. The employee sees their journey, what is late, who owns it and what happens next (scenario 1 on page 2: day 3, laptop late, owner named, policy IT-02 quoted).

Requests arrive **complete**: employee, step, target date, policy and response time, so service owners never ask again. Routine actions run through team agents (the learning agent books the next session). Policy answers are personalised where the policy allows, for example the relocation allowance for the employee's grade.

EARLY WARNING, ROUTED TO AN OWNER

For each employee, Daleel scores signals: steps past target, the chain of steps a delay holds up, requests open past the team's response time, repeat contact, silence, and low pulse **only with consent**. The HR business partner gets a ranked list (watch, at risk, stuck) with evidence and the suggested owner, usually the team that can fix the root cause, and decides what to do. A view of where journeys stall shows late steps by owner and location, in aggregate.

FIT FOR EMIRATES AND OTHER GOVERNMENT ENTITIES

Policies, journey maps, owners and response times are data, not code: another entity loads its own and the companion, tests and early warnings work unchanged. Column names are matched by meaning. The interface is bilingual (English and Arabic, right to left).

CONSENT, PRIVACY AND HUMAN OVERSIGHT

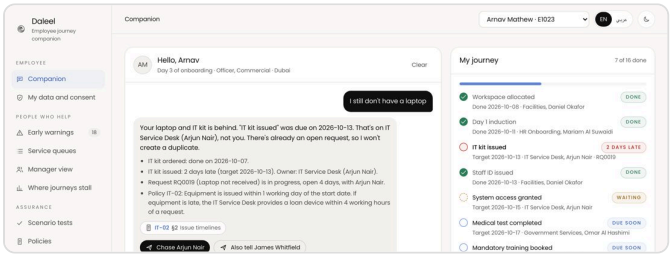

Daleel works for the employee. It is not a monitoring tool. Managers see task progress for their own joiners and movers only: never conversations, pulse feedback, comments or early-warning levels. Pulse feedback is opt-in, used only while consent is on, and can be deleted at any time; switching consent off removes pulse signals immediately.

The employee sees what is held about them: profile, journey events, requests, pulse responses, every signal shared with their HR partner, every handoff made for them and who did what, with a one-click download.

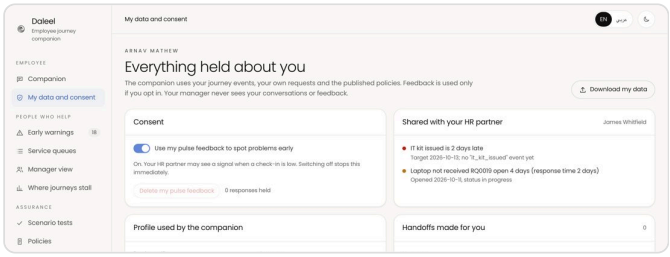

- **Human oversight:** every intervention that affects an employee goes to a named person. Before anything is sent, the employee sees who will receive it and exactly what will be shared. Disclosures of harassment, bullying or danger go straight to a person in confidence, with no automated questions.
- **No performance use:** Daleel declines performance, probation and disciplinary questions and never shares anyone else's information. Companion data is excluded from those decisions by policy and by design.
- **Honest answers:** every policy answer cites its section; when the policies do not cover a question, Daleel says it is not sure and hands off rather than guessing.
- **Data protection:** designed for the UAE Personal Data Protection Law (Federal Decree-Law 45 of 2021) and the principles of the UAE Charter for the Development and Use of AI: transparency, human oversight and accountability. Minimal data, retention limits, and a full audit trail.

HOW IT RUNS INSIDE EMIRATES' ENVIRONMENT

- **Deployment:** a static web application packaged as a container, in Emirates' private cloud or on premises. No cloud AI and no outbound connection.
- **Data in:** read-only feeds of journey events and request status from HR, IT, facilities, learning and government services systems; policies from the policy library. Handoffs go to the ticketing or case tool each team already uses.
- **Access:** Emirates single sign-on; roles for employee, HR business partner, service owner, manager and auditor.
- **This prototype:** the synthetic pack was processed only on our own machine and was not uploaded to any service that keeps or trains on data. The hosted demo uses Aonami's own synthetic sample; files loaded there stay in the viewer's browser.

Scenario 1, a new joiner, day 3. The laptop is two days late with the IT Service Desk; Daleel names the owner, chases the open request and quotes the policy section.

Consent and privacy. The employee sees everything held about them, can switch the opt-in pulse off or delete it; managers never see conversations.

PILOT NEXT QUARTER

WEEKS	ACTIVITY
1 to 2	Load journey maps, owners and policies; agree targets and response times
3 to 4	Shadow mode on one cohort of joiners and movers; compare early warnings with real escalations
5 to 8	Live with opt-in employees in one location; weekly review with HR partners
End	Time to resolve, escalations avoided, employee feedback; go or no-go

Limits we disclose: results are on our synthetic benchmark; Arabic text needs native review; policy answers are only as current as the policy library.

TEAM

Aonami builds AI agents and decision systems for regulated institutions, with a named person approving every action. A team of nine across engineering, AI and delivery; co-founders Pratik Kumar and Jayesh Kumar Rout, with backgrounds in lending, fintech and risk at Stashfin, OneCard and Northern Trust.
